## Clock in using KeyTime Mobile with GPS

Employee views details on smartphone

ExpressTime Online Suite users have the exclusive advantage of allowing their employees to clock in/out from a smart phone or other smart device. This is especially useful as it uses a GPS function to verify their location. The employee's time and coordinates are recorded in the ExpressTime database. With KeyTime Mobile, the employee can also view their accumulated hours and review their weekly schedule. Call us for more information on this unique feature using the latest technology.

Your company views coordinates in ExpressTime

### Timely Tidbits

We use KeyTime Mobile for our floor technicians and project workers to verify their location.
